STARDUCT - NHÀ SẢN XUẤT ĐƯỢC CHỨNG NHẬN

With 20 years of experience in manufacturing supporting products and systems for MEP and HVAC, Star Asia Jsc. (NSCA) has been suppying many heavy industrial, commercial with its products and service.

Products of Star Asia Jsc., including dampers under Starduct brand, are result from the combination of research, experience and expertises of our staff.
Star Asia Jsc. has a pride of the first company in Vietnam who is meet requirements of manufacturing and service for fire dampers and insulated fire dampers. All fire damper products from us have been certified of representative sample inspection as regulated by law. Starduct dampers have been servicing in many major projects all over the country in many years

PRODUCTION SYSTEM AND PROCESS OF STAR ASIA

Starduct dampers are produced uniformly by exact mechanic lines.

- Frame: CNC line
- Blades: CNC line
- Joints/connections: weldless, by clinching machines
- Mechanical control device: designed solely and produced precisely
- Electrical control device: imported directly from European manufacturers, installed and adjusted in factory by well trained technicians
- Process is inspected seriously as per ISO.

STANDARDS TO BE APPLIED

Following and meeting technical requirements of standard systems is the thoroughly direction of Star Asia Jsc. In designing, production, testing, we always base on and refer to highest standards of the industry such as AMCA, ASTM, ASHRAE, ISO, AHRI, TCVN...

MEMBERSHIP OF ASSOCIATIONS

Star Asia Jsc., is the official member of **AMCA (Air Movement and Control Association)**

STARDUCT là thành viên của AMCA Quốc tế
(Hiệp hội Lưu chuyển và Kiểm soát Không khí)

DIMENSIONS AND EXTENSION METHOD OF DAMPER

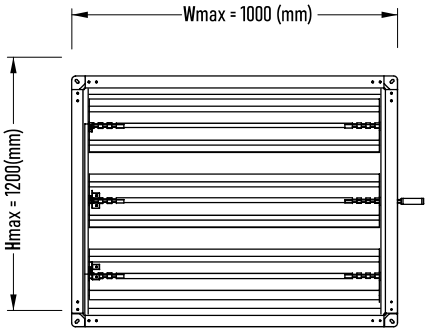
SINGLE SECTION DAMPER

Minimum dimensions:

- Width : W(min) = 100mm
- Height : H(min) = 100mm
- Depth : L(min) = 210mm

Maximum dimensions:

- Width : W(max) = 1000mm
- Height : H(max) = 1200mm
- Depth : L(max) = 210mm



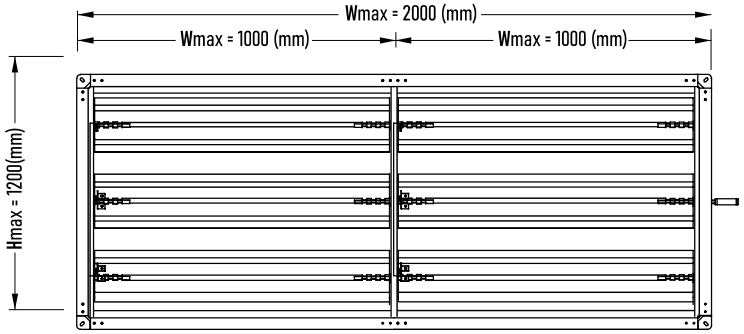
HORIZONTAL 2-SECTION MODULE

Maximum dimensions:

- Width : W(max) = 1000mm
- Height : H(max) = 1200mm
- Depth : L(max) = 210mm

Applicable for :

1000 < W ≤ 2000 mm
H ≤ 1200



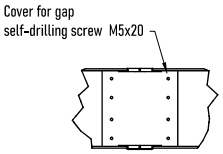
VERTICAL 2-SECTION MODULE

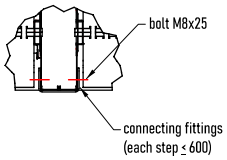
Dimensions:

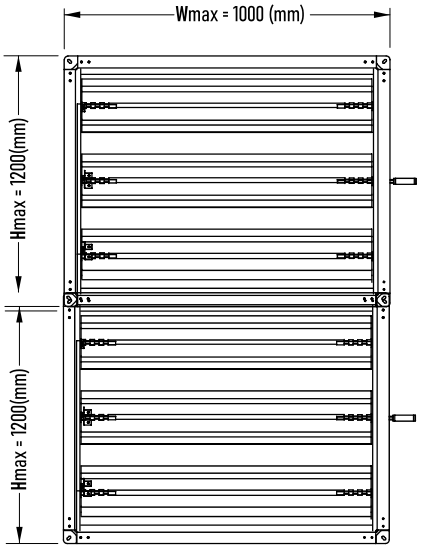
- Width : W(max) = 1000mm
- Height : H(max) = N x 1200mm
- Depth : L(max) = 210mm

Applicable for:

W ≤ 1000 mm
H > 1200







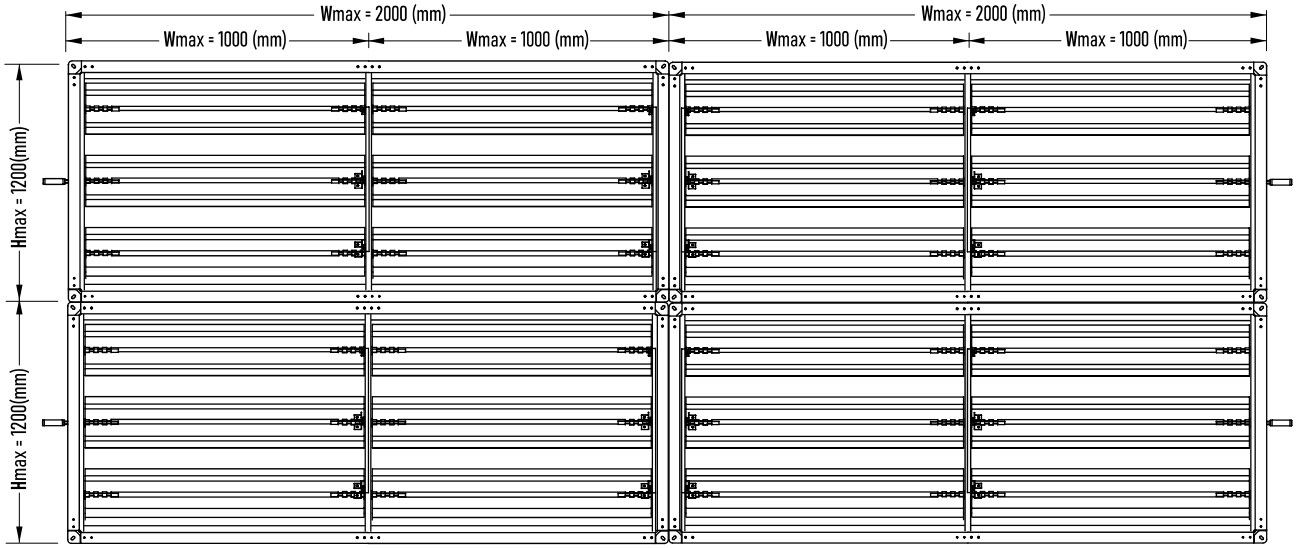
COMBINATION OF HORIZONTAL MODULE

Dimensions

- Width : W(max) = n x 2000mm
- Height : H(max) = n x 1200mm
- Depth : L(max) = 210mm

Applicable for :

W > 2000 mm
H > 1200



VOLUME CONTROL DAMPER - **SVCD**

OPPOSED BLADE DAMPER - OBD

PARALLEL BLADE DAMPER - PDB

1. FRAME AND MATERIAL:

Depending to the technical requirements of dimensions, working pressure, fire-rate, airtight-rate, the damper frame could be made of different materials and thicknesses. Standard material of Starduct for frames is galvanised steel sheet (up to 180g/m²) as per JIS G 3302:2010 and JIS H 0401:2007 (equivalent to ASTM A653/A653M), thickness from 0.75 to 1.5mm. Frame is made of C-profile one-piece for low and medium working pressure or "Hat-profile" for high working pressure.

2. BLADE AND MATERIAL:

Depending to the technical requirements of dimensions, working pressure, fire-rate, airtight-rate, the damper frame could be made of different materials and thicknesses. Standard material of Starduct for frames is galvanised steel sheet (up to 180g/m²) as per JIS G 3302:2010 and JIS H 0401:2007 (equivalent to ASTM A653/A653M), thickness from 0.75 to 1.5mm

Normally, parallel blade is applied for 2-position (open/closed) dampers, opposed blade dampers is applied for modulating/balancing damper

3. DAMPER SHAFT:

CT4 steel bar, galvanised (Z18) or stainless steel with various dimensions depending on the type of damper. The shaft could be square steel bar(10x10mm) or hexagon steel bar (D10)

4. INTERLOCK LIFTING MECHANISM:

Exactly fabricated from steel sheet in 2 types, opposed and parallel moving. The mechanism can be hidden inside the frame or exposed outside the frame.

5. AIRTIGHT SEALS OF FRAME AND BLADES

Depending to the technical requirements, seals can be applied or not. Materials can be rubber, silicone or stainless steel.

6. BUSHING/BEARING

Could be produced from PPP, cooper or bearing.

8. STIFFERNING CORNER AND JOINTS

Depending on type of damper, the corner of damper can be connected by clinched corner plate (one or two intergrated flanges), C-flange, S-clip for medium/low working pressure or V3, V4, V5 flanges for high working pressures.

9. CONTROL MECHANISMS:

- MOTORIZATION: Belimo actuators, made in Switzerland or USA with many different torque forces and functions (see the guide table in next page)
- MANUAL QUADRANT: produced by Star Asia, one-touch mechanism for easy operation and application. Control steps: 1~9 (10% each step)
- SCREW STEPLESS REGULATOR: produced by Star Asia, adjustment steplessly for exact control airflow.

10. PRODUCTION STANDARDS:

Starduct VCD/ NRD/ PRD dampers of Star Asia are produced in accordance with Ashrea 70:2006 and AMCA 500-D. Especially, all frames, blades and parts are fabricated in exact lines to get high and uniform quality.

11. AIRTIGHTNESS:

Starduct VCD/ NRD/ PRD dampers of Star Asia have low leakage, Class 2 of AMCA 500-D and can be get up to Class 1 if applied stainless seals for frame and blades .

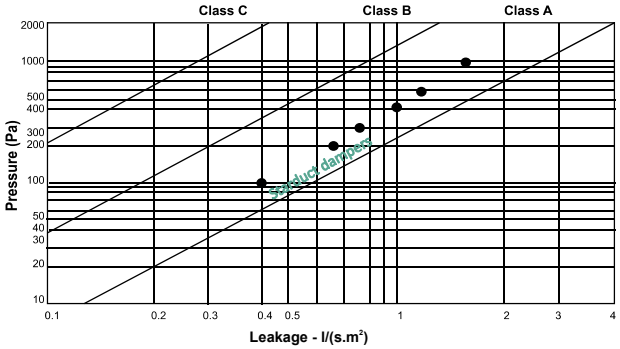
12. GUARANTEE:

Starduct VCD/ NRD/ PRD dampers of Star Asia are guaranteed in 24 months (from the delivery date). In addition, the actuator (motor) is guaranteed 60 month by the manufacturer Belimo.

Leakage rate - AMCA 500-D

1. Leakage rate - damper case (l/s.m²)

Class A (AMCA 500-D) tested method BS-EN 1751:1999



2. Leakage rate - damper blade (l/s.m²)

Class 1 (AMCA 500-D) tested method BS-EN 1751:1999

Table 1 : effective area of Starduct damper - Unit : cm²

$$\Delta P = C_o \times V^2$$

In which:

- C_o is the average pressure drop coefficent of 5-7 and 10m/s velocity, and C_o = 2.75
- V^2 (m/s) is the face area velocity going through the damper with

$$V_{damper} = \frac{Q\ (m^3/s)}{\text{Effective area}\ (cm^2)} \qquad V^2 = (V_{damper} - V_{duct})^2$$

Ghi chú: dữ liệu tính với van mở hoàn toàn

Example:

V_{duct} = 5 m/s, Damper size: 300x300mm ⟶ effective area 900 cm2

- **Q** = effective area x duct velocity = 900 x 5 = 4500 (m^3/h)
- V_{damper} = 4500/527 = 8.53 (m/s) [527 taken from the size 300x300 in the table]
- V^2 = (8.53 - 5)^2 = 12.52 (Pa)

Result: Pressure loss **ΔP** = 2.75 (C_o) x 12.52 (V^2) = **34.4 Pa**

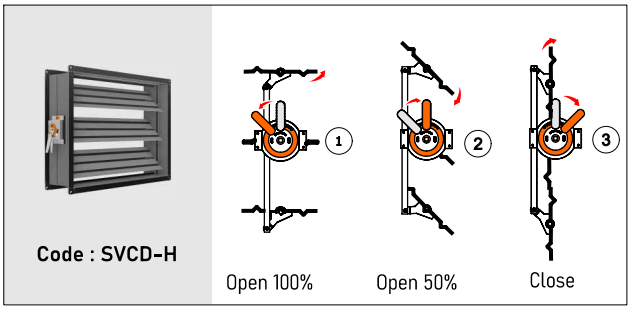
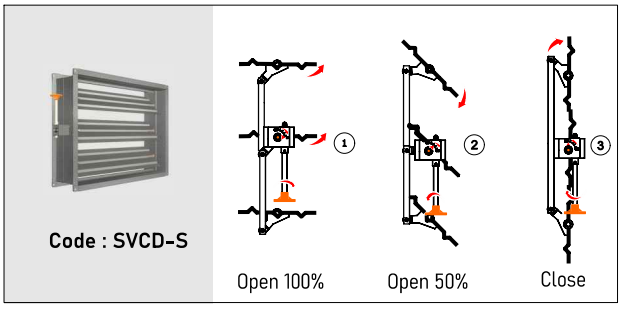
MANUAL CONTROL MECHANISM

1. **Manual quadrant (code HQ)**: produced by Star Asia, one-touch mechanism for easy operation and application. Control steps: 1~9 (10% each step)



Three basic positions

2. **Screw stepless regulator (code SQ)**: produced by Star Asia with plastic knob and exact mechanism for easy and precision operation. Stepless control , applicable for dampers need small and exact adjustment.



Three basic positions

MOTORIZED CONTROL MECHANISM

3. **Motorization (code M)**: Star Asia using only Belimo actuators from Switzerland, the leading brand of the industry. Belimo has ranges of many models such as On/Off, fast reaction, 220v AC or 24v DC. Installation and adjustment of actuator are jobs need professional expertises, so, 100% actuators should be installed and adjusted at factory by technicians being trained by the manufacturer :

ROUND VOLUME CONTROL DAMPER - **SVCD-T**

DESCRIPTION

Round volume control damper (SVCD-T) is used in most of HVAC systems to regulate the flow of air in intake, exhaust or mixed air applications.

The product is designed and produce as per requirements of round duct systems

- Standard: Ashrea 70:2006 / AMCA 500-D
- Low leakage rate: ± 5% (with EMDM seal)

CONSTRUCTION

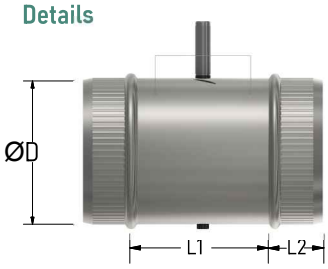
Materials

- Frame/housing: galvanized steel sheet of 0.75~1.15mm
- Blade: galvanized steel sheet 0.75~1.0mm
- Damper shaft: galvanized Ct4 steel bar
- Bushing: cooper /PPP
- Blade seal: silicone/EPDM

Sizes

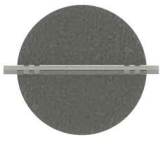
- Ø100 ~ Ø500 (mm)

Details



High-airtight blade EPDM seal

High-airtight blade silicone seal



Galvanized single-layer blade

Structure

- Housing: one-piece, weldness, clinching joint.
- Optional corrugated end
- Optional sealed blade

Working pressure

- Low, medium

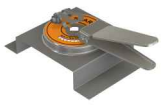
Control mechanisms

MOTORIZED **SVCD-T-M**

QUADRANT **SVCD-T-H**

SCREW REGULATOR **SVCD-T-S**

- BELIMO actuator



- One-touch quadrant

- Stepless regulator

NON-RETURN DAMPER - **SNRD**

DESCRIPTION

Non-return dampers (also known as gravity dampers) are used in ventilation systems to allow airflow in one direction and prevent airflow in the opposite direction. A relief damper is developed with an elevated and adjustable start-open pressure while providing the backdraft function.

When placed on a propeller fan, for example, it will prevent the wind from causing the fan to run backwards when the power is off.

CONSTRUCTION

Material

- Frame: galvanized steel, thickness 0.75~1.15 mm
- Blade: galvanized steel, Z18, thickness 0.75~1.0 mm
- Shaft: plated CT4 steel, Z18
- Bushing: bronze /PPP

Structure

- One-piece casing, clinching joint, weldness
- Optional corrugated ends

Control mechanism

- Counterweight/motorized

PRESSURE RELIEF DAMPER - **SPRD**

DESCRIPTION

Pressure relief dampers are backdraft air dampers with an adjustable start-open pressure. This provides the capability of maintaining a relative constant pressure at various airflows. The damper closes when there is a decrease in differential pressure. This damper is generally used as a safety or controlling device. For example, mounting this damper on a duct section would relieve unexpected overpressure or relieve negative pressure downstream of a rapidly closing fire damper.

CONSTRUCTION

Material

- Frame: galvanized steel, Z18, thickness 0.75~1.15 mm
- Blade: galvanized steel, Z18, thickness 0.75~1.0 mm
- Shaft: plated CT4 steel, Z18
- Bushing: bronze /PPP

Structure

- One-piece casing, clinching joint, weldness
- Optional corrugated ends

Control mechanism

- Counterweight/motorized

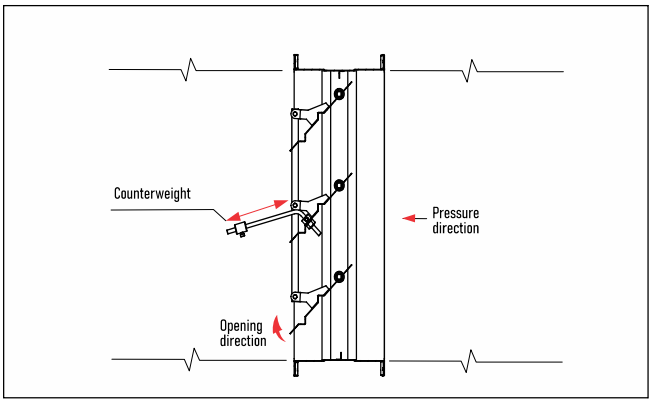
Press drop ΔPt (Pa)	Velocity V (m/s)
35	1
50	2
65	3
80	4
90	5



An expample of calculation and selection

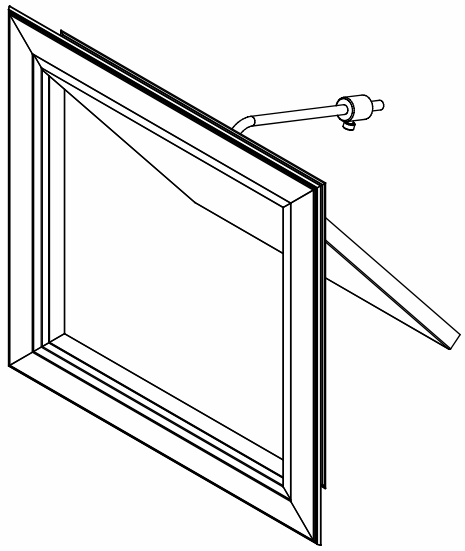
Given requirement:
- Damper size 600 x 1000 (mm)
- Max. pressure difference : 400 Pa
- Required ressure difference to start opening: 50 Pa

Taking from table: Max. volume = 1210 l./s (4356 m3/h)

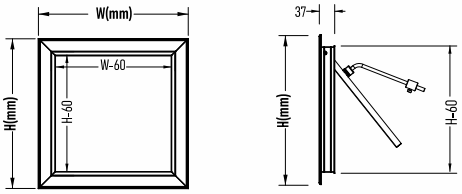
Calculation
A = 0.6 x 1.0 = 0.6m2
V = v x A = 2.0 l/s x 0.6 x 1000 = 4342 (m3/h) [1200 l/s]

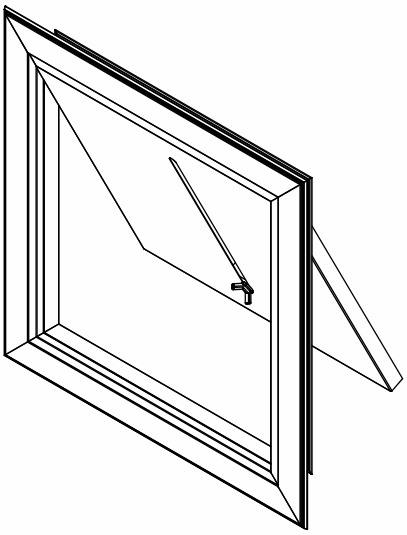
Conclusion
4342 m3/h [1200 l/s] is the volume for the damper of 600 x 1000 mm starting open @ 50 Pa

PRESSURE RELIEF DAMPER - **SPRD (SB/SF)**

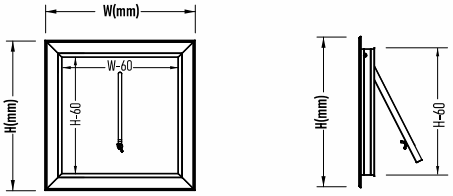


Model : S-PRD(SB)
Outer counterweight, adjust at the back





Model : S-PRD(SF)
Inner counterweight, adjust at the front



Materials

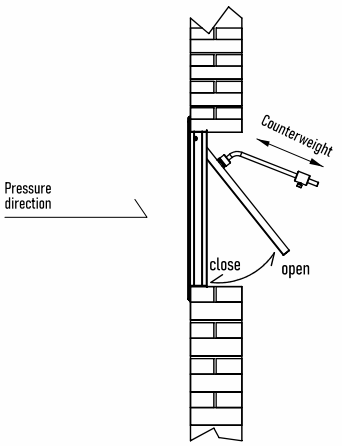
- Frame: aluminum 6063T5, thickness 1.2mm
- Blade: aluminum, thickness 0.8mm
- Surface: powder coating as per AAMA 2603-15

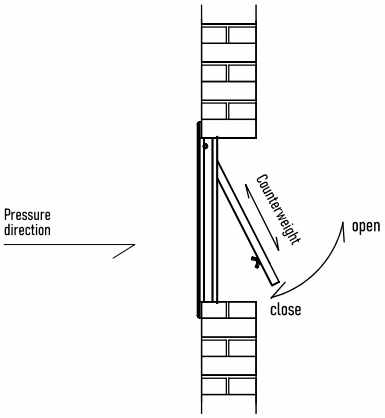
Mechanism

- Blade is openned by positive pressure inside the room to balance pressure in the room as requested.
- The counterweight can be adjusted to set the force of pressure (Pa)

Effective range

- Min. : 20 Pa
- Max.: 100 Pa (fully opened)





PERFORMANCE DATA

- WxH: **W** = width, **H** = height

DISC VALVE - **STD**

TYPICAL APPLICATION

Disc valve diffuser can be used for supply, exhaust and ventilation applications.

Best suited to air distribution systems handling relatively low air flow rates.

Recommended for exhaust of greasy and damp air in areas such as toilets, bathrooms and kitchens.

MATERIAL

- Frame and disc: high grade spun aluminum.
- Connect thread & frame: steel

FINISH

- Standard: powder coated RAL 9010 (option per RAL codes)

SIZE

- Optional (see table)

FEATURES

- Easy to adjust cone up & down
- Free area up to the cone position

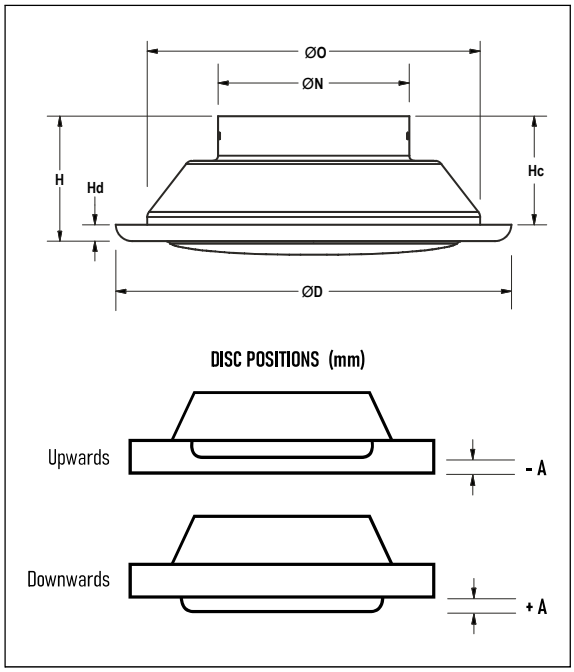
APPLICATION

- Air supply/return
- Ceiling mounted or directly to duct

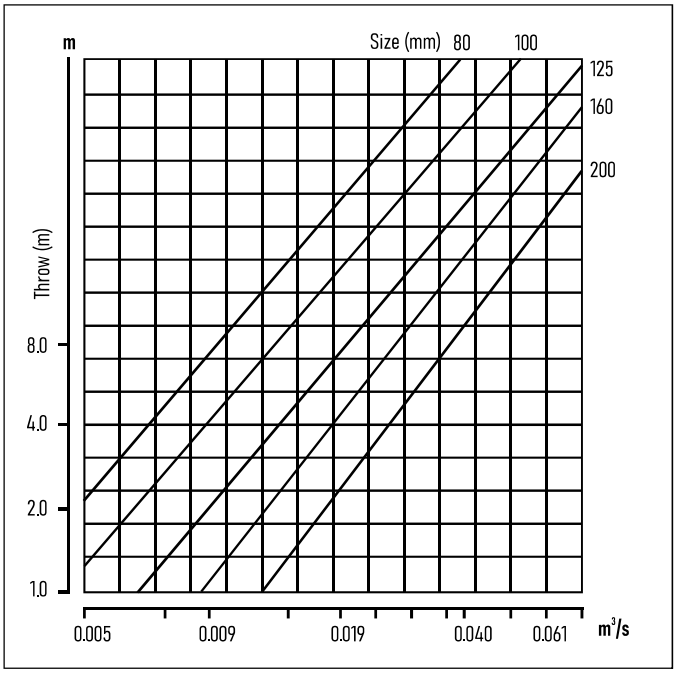
OPTIONAL ACCESSORIES

- GI plenum box

CONSTRUCTION



SUPPLY AIR VOLUME VS. THROW (for A = 0)



Note: for position A = +10, reduced throw by 30%, for position A = -10, increased throw by 40%

- STD: Standard valve
- D: Face size
- RAL: Colour: RAL codes
- M: Optional accessories: short/low plenum

Storage and handling

As fire damper is a safety element, it should be stored and handled with care

Avoid:

- Any kind of impact or damage
- Contact with water
- Deformation of the casing

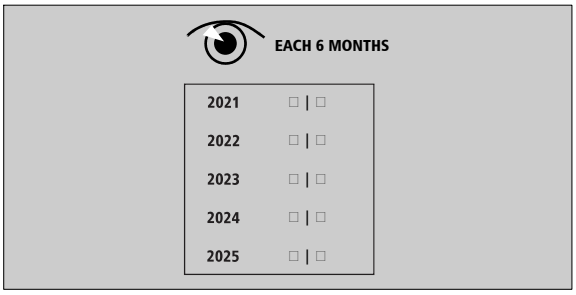
Recommendations for Star Asia :

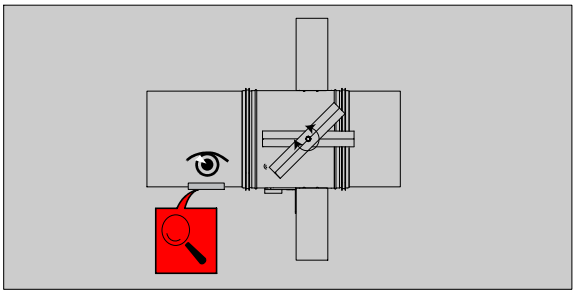
- To unload in a dry area
- Not to flip or roll the product to move it
- Not use the damper as a scaffold, working table etc.
- Do not store smaller damper inside large one
- Do not stand or seat on the product

Important notes when installation

General :

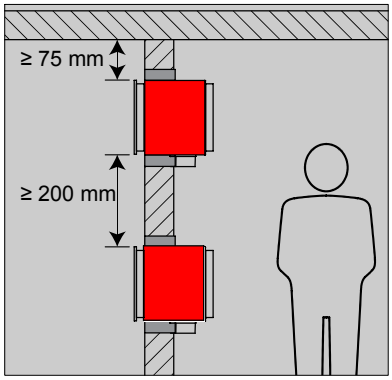
- The installation must comply with the installation manual delivered with the product and the classification report.
- Axis orientation: see the declaration of performance
- Avoid obstruction of adjoining ducts.
- Product installation: always doing with closed damper blade
- Verify if the blade can move freely
- Please observe safety distances with respect to other construction elements.The operating mechanism must also remain accessible: allow for a clearance of 200 mm around the housing.
- The air tightness class will be maintained if the damper is installed according to the installation manual.
- The fire dampers are always tested in standardised constructions according to QCVN 60:2021/BXD. The achieved results are valid for similar supporting constructions with a fire resistance, thickness and density equal or superior to the supporting construction used during the test.
- The damper must remain accessible for inspection and maintenance.
- Schedule at least two running checks each year.





Installation at a minimal distance from another damper or from an adjacent supporting construction

1



1. Principle according to the test standard:

Minimum distance of ≥ 75 mm from the ceiling

Minimum distance ≥ 200mm to an adjacent damper
